Bigfoot's Steps To Success

Save Time, Money and Labour with BackCountry Blend

BackCountry Blend (BCB) was designed as an economic choice for gardeners who want to **spend less, save time** and expend **less labour** in the process of getting the same reliable results.

What is BackCountry Blend?

BackCountry Blend (BCB) is a granular, slow-release nutrient system that provides your plants with stable nutrition throughout periods of vegetative, flowering and ripening growth. The complete feed program comes in three parts: **Grow, Bloom** and **Boost**. While each product has the same application in the garden, each part has its own function based on the specific stage of plant growth. Furthermore, the Grow, Bloom and Boost formulations of BackCountry Blend come incorporated with TrueCoat technology: a proprietary blend of micronutrients that are amended into each pellet of BackCountry Blend. This ensures that plants remain healthy and unblemished by nutrient deficiencies throughout all stages of growth.

Save Time

Unlike liquid fertilizers that require bi-weekly feedings, mixing and constant buffering, BackCountry Blend saves growers time by being the simplest and most aggressive slow-release formula on the market.

Save Money

Among other nutrient systems specifically tailored for the outdoor garden, BackCountry Blend is the only feed program that promises significant cost savings without compromising results.

Save on Labour

With a slow-release fertilizer like BackCountry Blend, you can expect a massive decrease in labour.

For us at YETIVA, BACKCOUNTRY BLEND worked flawlessly. AFFORDABILITY, STABLE & TIME SAVING !!! We were under time constraints and just couldn't have been busier, BACKCOUNTRY made daily and weekly maintenance a breeze and saved time in so many ways. PLUS our plants had never been happier. Not to mention the reps and staff at GreenPlanet answering any and all questions we had. We here at YETIVA will be continuing to use GREENPLANET from here on out.
