

Backcountry Blend Boost Additive Nutrient For Outdoor Use

Backcountry Blend Boost is a controlled release granular bloom additive. It can easily be applied to soil to provide your plants with a boost of PK during the flowering stage. Backcountry Blend Boost is part of the Backcountry Blend Outdoor Feed Program.

Additive Nutrient

Dry Fertilizer

Flowering Stage

HOW DOES IT WORK?

Backcountry Blend Boost is designed to be used in conjunction with Backcountry Blend Bloom during the flowering stage. Boost provides your outdoor plants with an extra dosage of phosphorus (P), potassium (K), and calcium (Ca), as well as an addition of humic acid. Phosphorus and potassium are vital elements that aid in the development of flowers and the movement of nutrients through the plant. Calcium plays a major role in cell wall composition and also helps maintain chemical balances in the soil. Humic acid aids in the movement of nutrients through the grow medium, making them easier for the plant to absorb. These added benefits improve overall yields, floral development, colour, and aroma. This formula is designed to be top-dressed 3-4 weeks into the flowering stage.

HOW TO USE IT?

Apply 0.5 tsp of Backcountry Blend Boost per 1 foot of plant height every 4 weeks between feedings of Backcountry Blend Bloom for the duration of the flowering period. Stop feed 4 weeks before harvest.

For optimal results follow the Backcountry Feeding Program during the plant's entire life cycle.

Product Benefits:

Save Time

BackCountry Blend (BCB) saves growers time by being the simplest and most aggressive slow-release formula on the market. Here are some of the time-saving qualities of the BCB feeding program:

- Monthly Feeding (every 3-4 weeks)
- No Mixing
- No Buffering
- Easy Application

Save Money

BackCountry Blend is the only feed program that promises economic nutrition without compromising results.

Save Labour

With a slow-release fertilizer like BackCountry Blend, you can expect a massive decrease in labor with capabilities like:

- Water Only Irrigation
- Minimal Application
- Easy to Train Staff
- No Water Reservoirs Needed
(Perfect for Irrigation Systems)
